

Digital Filters & Spectral Analysis

Lecture 2

The Fourier Series

Problem sheet

1. Plot the spectrum (amplitude and phase) of the following signal: $x(t) = 4\sin(7t)$. Use Euler's identity to find the spectrum. Explain the values on your phase vs. frequency plot.

2. Find the formula of the real signal $x(t)$ whose spectrum is shown below. What is the fundamental frequency f_0 of the signal?
